

ABSTRACT

A thermoplastic resin composition comprising a polylactic acid polymer (A), an acrylic polymer (B) containing units of methyl methacrylate monomer, and a graft copolymer (C) obtained by graft-polymerizing a vinyl monomer onto a rubbery polymer, wherein the refractive index, R_c , of the graft copolymer (C) and the total refractive index, R_{ab} , of the polylactic acid polymer (A) and the acrylic polymer (B) satisfy the following formula (1).

$$-0.004 \leq R_c - R_{ab} \leq +0.008 \quad (1)$$
